

The SpilMax® Oil & Fuel Fleet Spill Kit is uniquely contained in a robust, PVC bag to keep the contents permanently dry.

Easy to use, fold the top over three times and seal it with the buckle. This collar also provides a functional point to carry the bag.

The contents of the kits are intrinsically safe, hydrophobic and designed to absorb a wide range of hydrocarbons.

Designed for use in underground mining, these kits are ideal for fuel carriers, generators, lighting towers and underground service equipment.

As the bag keeps the contents totally dry, Fleet Spill Kits can also be used in environments where the spill kit will be exposed; such as open cut mining, oil & gas, agriculture, marine and construction.

SPILL KIT	TOTAL WEIGHT	DIMENSIONS	REFILL
CHOFK19	3kg	330mmDia x 750mmH	
CH4551Y	Yellow Dry Bag with Carry Handles and Buckle		1
